Hiring Manager
Oracle

Dear Hiring Manager,
I am writing to apply for the IC1 position in the Data Intelligence (FDI) Cloud Service Engineering team at Oracle. I am an entry-level software engineer with a strong foundation in backend development, database concepts, and problem-solving, and I am highly motivated to grow in cloud-native and distributed systems under the guidance of experienced engineers.

I am currently pursuing a Master of Computer Applications (MCA) and have completed a Full Stack Development program, including an internship at Synnefo Solutions. During this experience, I developed and maintained backend services, implemented RESTful APIs, and worked with databases such as MongoDB and MySQL. I have also completed formal coursework and certification in Java, which strengthened my understanding of object-oriented programming and backend system design.

Through my academic projects and internship work, I gained hands-on experience debugging issues across development and test environments, collaborating in Agile teams, and writing clean, maintainable code. I have deployed applications on cloud platforms such as Render and Vercel, giving me exposure to cloud deployment models, configuration management, and scalability concepts.

As an IC1 engineer, I am eager to learn best engineering practices, contribute to reliable enterprise systems, and gradually take on greater technical ownership. I am particularly excited about Oracle's work in large-scale cloud services and data intelligence platforms.

Thank you for your time and consideration. I look forward to the opportunity to further discuss my application.

Sincerely,
Mohamed Salih VA

MOHAMED SALIH VA
